RE: Skytron UVC Disinfection Solution

To whom it may concern:

On behalf of Skytron, thank you for considering Skytron UVC Disinfection Robots to aid in your facility's safety efforts. Collier's Medical Equipment is the exclusive Skytron representative in your area, making them your sole-source provider for all Skytron UVC products in the Collier's Medical Equipment coverage area.

Skytron offers the most extensive family of UVC devices on the market, each with Skytron's proprietary SmartDosage UV™ technology to detect the UVC field and automatically calculate the appropriate runtime for proper disinfection. This innovative design allows the Skytron 2280 to treat affected areas quickly and safely. Additionally, the Skytron 2280 is a dual tower system that works together to decrease the treatment time while still providing single cycle whole room disinfection. There is no other comparable product on the market, with features such as infrared motion sensors to detect motion and stop operation, a handheld controller used from outside the room to safely start the device, approximately 9,000-hour lamp life, and the capability to remove the top emitter portion from the base for small space disinfection. This product is exclusively manufactured and provided by Skytron out of Grand Rapids, Michigan.

The Skytron UV Smart Disinfection Chamber is a rapid countertop UVC disinfectant that can disinfect personal belongings in as little as 25 seconds. With 360-degree disinfection of high-touch items like mobile devices, remotes, keyboards and more, the UC Smart is a simple, user-friendly addition to your facility's safety measures.

We appreciate the opportunity to serve you. Brian Krass and I are available for any further questions you may have.

Sincerely,

Bob Lawrence
