To Whom it May Concern:

To the best of our knowledge, JailCore is the only solution on the market that offers Near Field Communication (NFC). Below I'll explain why NFC is important as well as the benefits of using NFC.

Why is NFC important?

The use of NFC allows the JailCore mobile application to be "locked down" until the correctional officer touches the corresponding NFC cell token or inmate wristband. This is important to ensure the CO actually went to the cell/inmate to perform their job, alleviating the possibility of falsifying a documented observation or activity.

What makes NFC unique?

If these NFC tokens were to ever lose their code, we have created a simple process within the app to re-code them. If they ever stop working altogether, replacement costs are in the \$1 range, however, JailCore provides these additional tokens to the jail as needed.

Because of the uniqueness and low cost of this NFC technology, this is an extremely important component to the JailCore application and makes us unique in that to date, we are unaware of any other similar technology using NFC.
